

Webinar 2021-03-25

Who are we

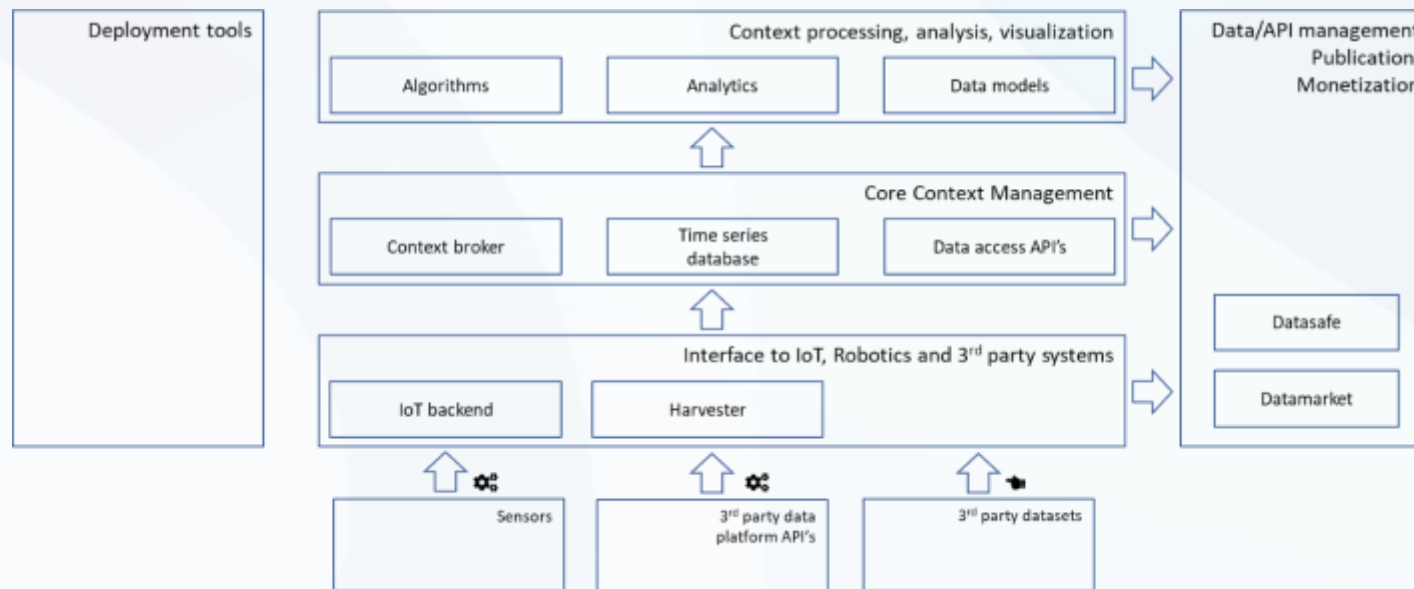

Bas Vanmeulebroek
Lead Developer and Architect

Richard Zuijdam
Director Civity

The role of Civity in SCOREwater

- Development and delivery of a central Data Platform
- Consultancy in assisting all parties to add IoT and other data to the central platform
- Delivery of methods to share data with other users (API Management solution) so that parties can manage how their data will be shared with third parties

Added value of collaboration Government with citizens (platform perspective)

Created by Heo Poh Lin
from Noun Project

Both parties have their own backgrounds and challenges. This results in data from different angles

Created by Bertrand Smets
from Noun Project

Both parties have their own way of how data is collected. Citizens in their own, direct environment. Government more from an overall perspective

Created by Milinda Courcy
from Noun Project

By combining this two different data collection new insights come available

Prerequisites on successful collaboration (platform perspective)

1. The difference in how data is collected must be adopted by both parties
2. As a platform provider you must be able to support both ways of data collections:
 1. Government has focus on validated and measured data.
 2. Citizens projects are often initiated from a more technical perspective with less focus on validation
3. The willingness of both parties to be open to work with each other data

Challenges in the collaboration (Platform Perspective)

Created by Ransh Pixel Studio
from Noun Project

A lot of collected data has specific owners (also provided by Commercial companies). Not all owners of data have the same ideas on the future use of data (Open Data of Paid). A lot of data has also GDPR limitations.

Due to the different collection methods, it is not easy to make the data available in a way that allows both parties to work with the data

Created by Flatart
from Noun Project

Once the data is available it's not easy to combine this data. Often extra third party data is needed to make it possible to really use the data for future use/making data meaningful
